Project Proposal ([Project A](#))

TWO IN ONE (Project A 🤝Mini Project #3)

- A large part of Project A is to create and experiment with **different kinds of motions** on the canvas. Week 2, Day 1 is entirely dedicated to exploring such motions in p5.
- Your Mini Project #3 asks you to do a variety of experiments with the techniques we learn (more details in the Mini Project's brief).
- An additional goal (besides regular practice) of Mini Project #3 is to find an intricate motion that you want to further develop and use for your Generative Creature in Project A.

Part 1: Documentation (DUE Tuesday, July 16)

Project Description: Explain the different sketches and motions you have explored as part of Mini Project #3 in-depth. Further expand on one of your experiments which you aim to develop into your Project A; explain why you have picked this particular motion – what makes it interesting, what is the narrative (see [Project A Brief](#)) that emerges from it in your imagination. Tell us about your imaginary creature and the way your project will present it. **(300-400 words)**

In your submitted document, write your full project description and a link to your presentation and submit it via Google Classroom.

Part 2: Presentation Slides (DUE Tuesday, July 16)

Note: you will NOT present this in class – the slides should be self-explanatory for others to click through them.

Presentation: Prepare a short Google Slide Deck containing:

1. the [working title](#) for your project.
2. 1-2 sentence description (not more!) ←these can be taken of your longer writing above
3. **2-3 references** that you find online. References should inspire aspects of your project - focus on projects related to **generative art** and **creative coding** (check out these links: [link1](#), [link2](#), [link3](#), [link4](#)). This can be inspiration that you plan to use for its design, or projects that are dealing with the same subject in a way that you find inspiring. Provide a link to these materials and 1-2 sentences why you selected them.

Post a link to the slide deck in our Slack Channel (not the gallery channel) at least 1 hour before class.
